

DigitalPersona® Personal

Identity Protection Suite™

- **Keeps you safer** when you use your computer
- **Protects your privacy** and your documents
- **Makes your life easier** on the Web

DigitalPersona Personal helps you protect against identity theft. With the simple touch of a finger, you can:

- Securely log on to the PC.
- Protect access to email, online banking and other Web sites without having to remember passwords.
- Monitor how protected you are when surfing the Web.
- Protect financial records, photos and other important files with the optional File Protection application.

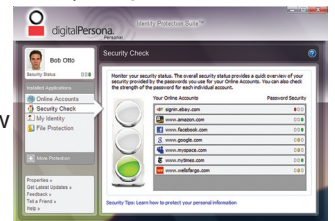

Identity theft is an increasing problem in today's world. **Existing solutions are not designed to protect against this threat.** As a result, only 26 percent of Internet users feel confident that they can protect themselves against identity theft.

DigitalPersona Personal

DigitalPersona Personal **specifically addresses identity theft** by empowering you to access your computer, online accounts and files with your fingerprint. Your personal information and private accounts are protected from unauthorized access.

At a glance, DigitalPersona Personal monitors the security level of your passwords. You are provided with a security score that alerts you if your password is not strong.

In addition, DigitalPersona Personal provides a detailed view of the protection status of each online account so that you can immediately spot potential flaws and fix them.

With the optional File Protection application, you can securely encrypt files, such as financial records and other important documents. Only the authorized user is able to access this private information.

Fingerprint Readers

DigitalPersona Personal works with fingerprint readers built into notebook computers or plugged in as an external peripheral device. Registering your fingerprint is fast and easy. Your actual fingerprint is not stored, nor does any personal account information or fingerprint data ever leave the computer.

About DigitalPersona

DigitalPersona, Inc. is the leading provider of fingerprint identity solutions for consumers, enterprises and custom application developers. The company offers software and hardware that protects people and businesses by enabling them to control their digital identities. DigitalPersona's award-winning technology has been used worldwide by over 95 million people.
